```
================================================================================
|STEP 1: CONVERT FROM                                                          |
|Choose a number system:                                                       |
================================================================================
+-------------+   +-------------+   +-------------+   +-------------+
|     [2]     |   |     [8]     |   |     [10]    |   |     [16]    |
|   Binary    |   |    Octal    |   |   Decimal   |   |Hexadecimal  |
+-------------+   +-------------+   +-------------+   +-------------+
Type 2, 8, 10, or 16 and press Enter: 8

================================================================================
|STEP 2: CONVERT TO                                                            |
|Choose a number system:                                                       |
================================================================================
+-------------+   +-------------+   +-------------+   +-------------+
|     [2]     |   |     [8]     |   |     [10]    |   |     [16]    |
|   Binary    |   |    Octal    |   |   Decimal   |   |Hexadecimal  |
+-------------+   +-------------+   +-------------+   +-------------+
Type 2, 8, 10, or 16 and press Enter: 10

================================================================================
Enter a octal number
Use only digits 0 to 7
================================================================================
Number: 1627

================================================================================
TO DECIMAL (digit x base^position)
================================================================================
1 x 8^3 = 512
6 x 8^2 = 384
2 x 8^1 = 16
7 x 8^0 = 7
Total = 919
================================================================================

================================================================================
RESULT
1627 (octal)
= 919 (decimal)
================================================================================

================================================================================
WHAT NEXT?
Retry      = same bases, new number
New Bases  = choose new bases
Quit       = exit the program
================================================================================
+-------------+   +-------------+   +-------------+
|     [R]     |   |     [N]     |   |     [Q]     |
|   Retry     |   | New Bases   |   |    Quit     |
+-------------+   +-------------+   +-------------+
Type R, N, or Q and press Enter: q

================================================================================
                    Thank you for using NumSysPro!
